franciscoperezdeveloper@gmail.com
<https://linkedin.com/in/franprzdev>

Final-year Information Systems Engineering student with nearly three years of industry experience building clean and scalable systems. I have evolved from full-stack engineering into designing applied AI solutions and workflow automations. Beyond writing code, I bring strong product sense and strategic thinking to build systems that truly make sense and drive business value. I also have proven experience leading technical courses and workshops.

HIGHLIGHTS

NASA Space Apps (2024) National Winning Project — Hackathon in Buenos Aires (Virtual Participation).

NASA Space Apps (2025) National Competitor — Hackathon in Buenos Aires (Virtual Participation).

Hackathon Vortex Software n8n (2025) On-site Competitor — Tucumán.

WORK EXPERIENCE

AI Engineer at RepuestoShop — Dec 2025 – Present

Architect and deploy multi-agent systems and custom RAG pipelines using LangChain, LangGraph and other tools, focusing on agent harness engineering, tool calling, and context control. Build internal tools with Meta APIs and web scraping pipelines for data grounding. Highly driven and hands-on, I leverage modern tooling (Codex, Claude Code) to proactively research unfamiliar tech, benchmark models, and rapidly deliver solid, production-ready POCs.

FullStack Developer at Fundación Líderes de Ansenuza — Apr 2025 – Present

Lead the organization's end-to-end digital transformation as a volunteer, modernizing the web platform, internal management tools, and online presence. Build and maintain scalable full-stack features to streamline internal operations and optimize digital channels, directly supporting fundraising efforts and expanding the foundation's outreach across Argentina and internationally.

Product Engineer at RollingCode Studio — Oct 2024 – Dec 2025

Contributed to multiple end-to-end web projects, building scalable frontend and backend features using Scrum, Git Flow, and clean code practices. Focused on structured, product-driven solutions while bringing new ideas to the team, such as automating internal tasks with n8n and exploring practical AI tools through working POCs.

Instructor, Process Automation with n8n (Tucumán Judiciary) – Sep 2025 – Oct 2025

Designed and delivered a 20-hour practical course on workflow automation with n8n for the Tucumán Judiciary. Created original materials and led live build sessions covering API/webhook integrations, automation best practices, RAG pipelines, and Human-in-the-Loop workflows to eliminate repetitive administrative tasks.

Teaching Assistant, Web & Advanced Backend Development – RollingCode School – Nov 2023 – Aug 2024

Supported lead mentors in delivering web development and advanced backend classes. Helped students troubleshoot code, guided hands-on exercises, and facilitated a collaborative learning environment centered around clean code and backend fundamentals.

EDUCATION

Universidad Tecnológica Nacional (UTN) — B.S. in Information Systems Engineering, 2022 – Present

CERTIFICATIONS

- **RollingCode School — FullStack Developer (MERN)**, Nov 2022 – Sep 2023 (Honored as Outstanding Student)
- **RollingCode School — Advanced React**, May 2024 – Sep 2024
- **RollingCode School — Advanced Next.js**, Jun 2025 – Nov 2025
- **RollingCode School — Data Engineer**, Jun 2025 – Oct 2025
