SUMMARY

Software engineer with almost four years of experience building and shipping web products end to end, now focused on applied AI: multi-agent systems, RAG pipelines, tool calling and workflow automation. Information Systems Engineering student (UTN-FRT, expected graduation Dec 2027). NASA Space Apps 2024 national winner.

EXPERIENCE

AI Engineer - RepuestoShop | Remote · Dec 2025 - Oct 2026
- Built the whole system end to end: an AI that processed over 50 leads a day with their likely purchase case, and a CRM built from scratch that displayed that information.
- Designed and deployed a multi-agent assistant (LangGraph) with tool calling and retrieval over scraped catalog data via SQL full-text search to answer customer questions.
- Built internal tools and automations for other parts of the business, integrating Meta APIs and scraping pipelines that feed the agents with data.
- Benchmarked LLM providers for the best cost/quality trade-off in production; used Codex and Claude Code to ship POCs fast.

Product Engineer - RollingCode Studio | Oct 2024 - Dec 2025
- Built frontend and backend features for client web products (React, Next.js, Node.js); automated internal tasks with n8n; Scrum, Git Flow and code review.
- Reduced, together with the team, the time of a bureaucratic procedure by 90%: from over 12 months to under a month. Another certificate process went from one month to one week.

Instructor, Process Automation with n8n - Poder Judicial de Tucumán | Sep - Oct 2025
- Designed and taught a 20-hour course on n8n, APIs/webhooks and RAG workflows; presented the automation strategy to the Judiciary leadership.

Full-Stack Developer (Volunteer) - Fundación Líderes de Ansenuza | Apr 2025 - Present
- Rebuilt the foundation's web platform and internal tools (Next.js, Prisma, PostgreSQL).

Teaching Assistant, Web & Backend - RollingCode School | Nov 2023 - Aug 2024

PROJECTS & AWARDS

- **NASA Space Apps 2024** - National winner (ExoGames); national competitor again in 2025.
- **Proofy** (Solana hackathon 2026, prototype) - AI agent that turns a contract scope into verifiable milestones and releases escrow payments based on CI/CD evidence.
- **Presu** (2026, prototype) - ChatGPT app (MCP server) that turns a product idea into a clear scope and a PDF quote through guided Q&A; credits and BNB testnet payments. Presented at the BNB Builder Session Tucumán (Oct 2026, participant).
- **Reelsmith** (2026) - MCP server in Rust that lets an AI assistant render short promo videos from gameplay clips, with automatic QA (loudness, black frames).
- **Vortex Software n8n Hackathon 2025** - competitor (Tucumán).

EDUCATION & CERTIFICATIONS

B.S. Information Systems Engineering, UTN-FRT (2022 - Dec 2027, expected)
RollingCode School: Full-Stack MERN (Outstanding Student, 2022-2023) · Advanced React (2024) · Advanced Next.js (2025) · Data Engineer (2025)
OpenAI Academy: Agents and Workflows (Sep 2026) · Applied AI Foundations (Aug 2026) · AI Foundations (Aug 2026)
Google: AI Essentials (Oct 2025) · Prompting Essentials (Oct 2025)
Languages: Spanish (native) · English (B1) · Russian (A1)

TECH STACK

AI: LangGraph, multi-agent systems, MCP (Model Context Protocol) servers, tool calling / function calling, RAG, LLM APIs (OpenAI, Anthropic, Gemini) · **Languages:** TypeScript, JavaScript, Python, SQL · **Frontend:** React, Next.js, Tailwind · **Backend:** Node.js, Express, REST, webhooks · **Data/Cloud:** PostgreSQL, MongoDB, Supabase, AWS, Vercel, Netlify · **Automation:** n8n, Google Workspace APIs, Meta APIs · **Practices:** Git, Git Flow, CI/CD, Scrum, code review
Also: Vector search / embeddings (working knowledge) · SQL · ISO 9001 and ISO 27001 (university coursework) · Cybersecurity (university coursework) · Data analytics · Logical thinking
